Definitive Design

From conception to construction documentation, design projects within an intuitive environment.

Building information modeling and Autodesk Revit Architecture are key components of our larger strategy to provide a much more comprehensive and integrated service to our clients.

Autodesk® Revit® Architecture software helps you explore your most innovative design concepts and forms at the earliest possible stages of your project and maintain your vision through construction documentation. Purpose-built for building information modeling (BIM), Autodesk Revit Architecture supports sustainable design, clash detection, construction planning, and fabrication, while helping you work collaboratively with engineers, contractors, and owners. All design changes along the way are automatically updated throughout your evolving design and documentation, making for more coordinated processes and reliable documentation.

Complete Projects, One Environment

Autodesk Revit Architecture software's conceptual design features provide easy-to-use tools for free-form modeling and parametric design, enabling you to analyze designs from the earliest stages of development. Sketch freely, create 3D forms quickly, and manipulate forms interactively. Prepare your models for fabrication and construction with built-in tools for conception and clarification of complex forms. Autodesk Revit Architecture automatically builds a parametric framework around forms as you design, offering you greater levels of creative control, accuracy, and flexibility. Take your design from concept model all the way to construction documents, all within one intuitive environment.

Authoritative Decisions, Sooner

Autodesk Revit Architecture software supports early analysis of your building forms so your team can make better informed decisions earlier in your project. Use this capability to clarify areas and volumes, perform daylighting and energy analysis, and gain insight into manufacturing viability and early construction material takeoffs.

Functional Forms

The Building Maker feature in Autodesk Revit Architecture helps you transform your conceptual forms into fully functional building designs. Select and add faces to design walls, roofs, floors, and curtain systems. Extract important building information, including gross area per floor. Bring conceptual massing concepts from applications such as AutoCAD® software and Autodesk® Maya® software as well as AutoDesSys form•Z®, McNeel Rhinoceros®, Google™ SketchUp®, or other ACIS®- or NURBS-based applications into Autodesk Revit Architecture as mass objects, and begin schematic design.

Coordinated, Accurate Design Information

Autodesk Revit Architecture software is built to work the way architects and designers think about buildings. Work naturally, design freely, and deliver efficiently within a single environment.

Autodesk Revit Architecture generates every schedule, drawing sheet, 2D view, and 3D view from a single foundational database, automatically coordinating changes across all facets and presentations as your project develops and evolves.

Bidirectional Associativity

A change anywhere is a change everywhere. In Autodesk Revit Architecture, all model information is stored in a single, coordinated database. Revisions and alterations to information are automatically updated throughout the model, minimizing errors and omissions.

Schedules

Schedules provide another view of the comprehensive Autodesk Revit Architecture model. Changes to a schedule view are automatically reflected in all other views. Functionality includes associative split-schedule sections and selectable design elements via schedule views, formulas, and filtering.

Detailing

The extensive detail library and detailing tools provided within Autodesk Revit Architecture enable extensive presorting, easing alignment with the CSI format. Detail libraries can be created, shared, and tailored to better accommodate your office standards.

Parametric Components

Parametric components, also known as *families*, are the basis for all building components designed in Autodesk Revit Architecture. These components offer an open, graphical system for design thinking and form making, while providing the opportunity to adjust and express design intent at increasingly detailed levels. Use parametric components for elaborate assemblies, such as cabinetry and equipment, as well as for elementary building parts, such as walls and columns. Best of all, no programming language or coding is required.

Material Takeoff

Calculate detailed material quantities with Material Takeoff. Ideal for better calculation of material quantities on sustainable design projects and cost estimates, Material Takeoff helps smooth the material quantity tracking process. As projects evolve, the Autodesk Revit Architecture parametric change engine updates material takeoffs.

Interference Check

Use interference checking to scan your model for collisions between elements.

Task-Based User Interface

The Autodesk Revit Architecture user interface offers desktop organization through a large drawing window and access to the tools and commands you need. Tools are organized into a collection of tabs and panels to represent architectural workflows such as creation, annotation, or collaboration.

Exceed and Succeed

Better Manage individual and team processes. Deliver more complete documents and higher-quality designs. Most importantly, win more business with clear and complete presentations.

Design Visualization

Create and capture photoreal design ideas and contextual environments to help you experience your project, even before it is built. Integrated mental ray® rendering software is easy to use and delivers high-quality output, faster render times, and a striking design presentation.

Team Workflow

Improve your workflow with projects containing linked files with the ability to apply view filters and tag elements, and control the visibility of worksets in linked files. Autodesk Revit Architecture also allows you to export building model or site data directly to AutoCAD® Civil 3D® software or to import data-rich models directly from Autodesk® Inventor® software.

Native 64-bit Support

Native 64-bit support enhances Autodesk Revit Architecture software's ability to handle large projects and helps improve performance and stability for memory-intensive tasks such as rendering, printing, model upgrading, and file importing and exporting.

Support for Sustainable Design

Autodesk Revit Architecture supports sustainable design processes from the earliest stages. Export building information, including materials and room volumes, to gbXML (green building extensible markup language). Perform energy analysis using Autodesk® Green Building Studio® web-based services, and study building performance employing Autodesk® Ecotect® Analysis software. Use Autodesk® 3ds Max® Design software to help evaluate indoor lighting analysis in support of LEED® 8.1 certification.

Autodesk Revit Architecture Success Story

HNTB Corporation

Since adopting Autodesk Revit Architecture software, the HNTB Corporation has been able to successfully complete dozens of BIM projects, including the \$183 million U.S. Army Human Resources Center of Excellence (HRCoE)—the largest construction project ever undertaken at Fort Knox.

To meet the challenge, HNTB teamed with Turner Universal, a well-known construction company. Together, the two firms chose to implement a design-build project delivery method supported by Autodesk BIM solutions.

HNTB and Turner Universal developed the Fort Knox HRCoE initial design in only 60 days—a notable feat given the project's scope. "One of the biggest advantages of using Revit Architecture was that we could change the design in one place and the software would automatically update the rest of the model," says Marwan Bakri, HNTB BIM federal technology manager. "That helped us see the impact of our changes immediately and take a new course of action if necessary."

Even given the restraints of the fast-track design-build process, HNTB delivered tremendous design value and flexibility. "Using the Revit platform, we worked more efficiently and with a much greater degree of coordination," says Bakri. "BIM helped us to give more—even with the restrictions of schedule."

BIM—Simply a Better Way of Working

Deliver projects faster, more economically, and with enhanced potential for reduced environmental impact.

AutoCAD Revit Architecture Suite— for Maximum Flexibility and Advantage

AutoCAD® Revit® Architecture Suite software includes AutoCAD® software, AutoCAD® Architecture software and Autodesk Revit Architecture. Utilizing this suite enables you to transition to BIM while protecting your legacy software, training, and design data investments. Autodesk Revit Architecture delivers a powerful competitive advantage by facilitating analysis for sustainable design, automatically delivering coordinated, consistent documentation, and helping speed creative design work. Support ongoing work in either AutoCAD or AutoCAD Architecture while you make the switch to BIM with Autodesk Revit Architecture, at your own pace.

Purpose-built for BIM

Autodesk Revit Architecture is purpose-built for BIM. BIM is an integrated process built on coordinated, reliable information about a project from design through construction and into operations. By adopting BIM, architecture firms can use this consistent information throughout the process to design and document innovative projects, accurately visualize appearance for better communication, and simulate real-world performance for better understanding of cost, scheduling, and environmental impact.

The BIM advantage

BIM helps building professionals stay competitive in an increasingly complex business climate by giving them the ability to better predict the outcome of a building before it is built. Using BIM helps architects and designers to create more sustainable, accurate designs with fewer errors and less waste, helping to achieve higher profits and more satisfied clients. BIM also optimizes team collaboration, enabling architects to more clearly and reliably communicate design intent to engineers, contractors, fabricators, and owners.

The confidence the BIM approach provides is a major benefit. We are really starting to reap the productivity benefits of Autodesk Revit Architecture software. It is very exciting.
